

图1 多智能体情绪感知人智协同决策系统机制图

Fig.1 Mechanism of Multi-Agent Emotion-Aware Human-AI Collaborative Decision System

注: MAEA-HCDS遵循"情绪扰动→激励阻断→协同鲁棒→持续稳健"递进因果链。行为感知层将前景理论与OCC框架转化为可计算情绪状态 E_t ;

智能决策层通过DQN+PER习得"按需订货"策略; 多体协同层基于CTDE+QMIX实现上下游信息共享;

持续适应层引入EWC抑制灾难性遗忘。各层文献引用对应正文参考文献编号。

Note: MAEA-HCDS follows the progressive causal chain of "Emotional Disturbance → Incentive Blockage → Collaborative Robustness → Continual Robustness".

Behavior Perception converts prospect theory and OCC framework into computable emotion state E_t ; Intelligent Decision learns "on-demand ordering" via DQN+PER;

Multi-Agent Coordination enables upstream-downstream information sharing via CTDE+QMIX; Continual Adaptation suppresses catastrophic forgetting via EWC.
